Summary

Java Full Stack Software Developer with a B.Sc. in Computer Science (2025) and hands-on experience building end-to-end web applications across Java, Spring Boot, React.js, PHP, and MySQL. Comfortable across the full web architecture — designing RESTful APIs and relational databases on the back end, and building responsive, user-friendly interfaces with HTML5, CSS3, and JavaScript (ES6+) on the front end. Known for strong problem-solving skills, excellent verbal communication, organizational skills, and attention to detail — applying Spring Security, Spring Data JPA/Hibernate, Git, GitHub, Postman, Maven, Docker, and Agile practices to deliver reliable software end to end.

Education

Bachelor of Science (B.Sc.) in Computer Science 2022 – 2025
St. Joseph's College of Arts and Science

Certifications

Java Full Stack Developer
Professional IT Training Program in Java Full Stack — Techpanda, via Trainer Central by Zoho
Data Science and Data Analytics using Python 2024 – 2025
PG & Research Department of Computer Science & Artificial Intelligence
Web Development Fundamentals 2026
IBM SkillsBuild — Completion Certificate

Professional Experience

Java Full Stack Developer — Professional Training Program Nov 2025 – Jul 2026
Training Program *Chennai, Tamil Nadu*

- Built Java applications using Core Java, OOP, Collections, Exception Handling, and JDBC across 6+ hands-on projects during the training program.
- Engineered RESTful back-end APIs with Spring Boot, implementing CRUD operations across 15+ endpoints for full stack web applications.
- Designed and managed MySQL databases with 8+ relational tables, applying strong database management and organizational skills to keep schema design consistent across projects.
- Created responsive web interfaces and user interfaces using HTML5, CSS3, and JavaScript (ES6+), following modern web design practices.
- Applied MVC architecture and SDLC practices consistently across 3 full stack projects, using strong problem solving skills to debug and resolve integration issues.
- Collaborated using Git, GitHub, and Postman for version control and REST API testing, maintaining zero merge conflicts through clear verbal communication with teammates.

Projects

Hospital Appointment Scheduling System (MedBook) | *Java*, *Spring Boot*, *MySQL*, *React*

- Developed a full stack web application with separate back-end/front-end modules, supporting 3 user roles (patient, doctor, admin) across appointment workflows.
- Engineered 12+ RESTful back-end APIs in Java and Spring Boot to handle patient, doctor, and appointment operations.
- Modeled 7 relational entities in MySQL using Spring Data JPA/Hibernate for persistence and CRUD operations.
- Secured back-end endpoints with Spring Security, enforcing role-based access control across all API routes.

Bank Management System | *Java*, *Spring Boot*, *MySQL*

- Built a banking web application supporting account management, deposits, withdrawals, and fund transfers for up to 4 account types.
- Delivered REST back-end APIs for 10+ account and transaction operations using Spring Boot.
- Structured 5 MySQL tables with CRUD logic implemented via SQL and Spring Data JPA.
- Applied OOP principles, MVC architecture, and input validation to handle edge cases such as insufficient balance and invalid transfers.

Technical Skills

Languages: Java, Python, JavaScript (ES6+), PHP, SQL, HTML5, CSS3
Back End: Spring Boot, Spring Security, Spring Data JPA, Hibernate, JDBC, REST APIs
Front End: React.js, HTML5, CSS3, Responsive Web Design
Database: MySQL, Oracle (Basics), SQL, CRUD Operations, Database Design & Management
Architecture: MVC, REST Architecture, Web Architecture, Object-Oriented Programming
Tools & Build: Git, GitHub, Postman, Maven, Docker, IntelliJ IDEA, Eclipse, VS Code
